

**Purple Fountain Beech**  
*Fagus sylvatica 'Purple Fountain'*

Height: 20 feet

Spread: 6 feet

Sunlight:

Hardiness Zone: 5a

Other Names: Common Beech, European Beech

**Description:**

An incredible accent tree with smooth gray bark, cascading branches and vertical habit; glossy burgundy leaves in spring turn to green; leaves are coppery in fall; a most stately specimen

**Ornamental Features**

Purple Fountain Beech is primarily valued in the landscape for its rigidly columnar form. It has attractive deep purple deciduous foliage which emerges burgundy in spring. The serrated pointy leaves are highly ornamental and turn an outstanding coppery-bronze in the fall. The smooth silver bark is extremely showy and adds significant winter interest.

**Landscape Attributes**

Purple Fountain Beech is a dense deciduous tree with a narrowly upright and columnar growth habit. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree, and is best pruned in late winter once the threat of extreme cold has passed. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Purple Fountain Beech is recommended for the following landscape applications;

- Accent
- Shade
- Vertical Accent

### **Planting & Growing**

Purple Fountain Beech will grow to be about 20 feet tall at maturity, with a spread of 6 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and should not be planted underneath power lines. It grows at a slow rate, and under ideal conditions can be expected to live to a ripe old age of 120 years or more; think of this as a heritage tree for future generations!

This tree does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America.
