

Golden Mop Falsecypress
Chamaecyparis pisifera 'Golden Mop'

Height: 5 feet

Spread: 5 feet

Sunlight:

Hardiness Zone: 4a

Other Names: Japanese Falsecypress, Sawara Falsecypress

Description:

A variety of threadleaf falsecypress with fine, almost string-like golden foliage all season long, giving an extremely fine texture; a compact variety, ideal for color and texture contrast in the garden

Ornamental Features

Golden Mop Falsecypress is a dwarf conifer which is primarily valued in the landscape or garden for its ornamental globe-shaped form. It has attractive yellow evergreen foliage which emerges gold in spring. The threadlike sprays of foliage are highly ornamental and turn lime green in the fall, which persists throughout the winter.

Landscape Attributes

Golden Mop Falsecypress is a multi-stemmed evergreen shrub with a more or less rounded form. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This shrub will require occasional maintenance and upkeep. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Golden Mop Falsecypress is recommended for the following landscape applications;

- Accent
- General Garden Use

Planting & Growing

Golden Mop Falsecypress will grow to be about 5 feet tall at maturity, with a spread of 5 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more.

This shrub does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type, but has a definite preference for acidic soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.

Growing Place Choice Plants

Our Growing Place Choice plants are chosen because they are strong performers year after year, staying attractive with less maintenance when planted in the right place.
