

Jacques Cartier Rose
Rosa 'Jacques Cartier'

Height: 6 feet

Spread: 4 feet

Sunlight: ☉

Hardiness Zone: 4b

Other Names: Marchesa Boccella Rose

Group/Class: Portland Rose

Description:

An outstanding rose with rich fully double pink flowers that fade to shell pink, and contrast exceptionally well with the green foliage, on a relatively compact plant; consistently blooms on short straight stems; needs full sun and well-drained soil

Ornamental Features

Jacques Cartier Rose is clothed in stunning fragrant pink round flowers with shell pink overtones at the ends of the branches from late spring to late summer. The flowers are excellent for cutting. It has green deciduous foliage. The oval compound leaves do not develop any appreciable fall color.

Landscape Attributes

Jacques Cartier Rose is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This shrub will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting bees and butterflies to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spiny

Jacques Cartier Rose is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Jacques Cartier Rose will grow to be about 6 feet tall at maturity, with a spread of 4 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
